SAFE · COMPLIANT · RESPONSIBLY PROCESSED

Disused Source Processing

A complete, end-to-end solution for the safe management of disused hazardous and radioactive sources — protecting personnel, the public, and the environment at every stage.

We manage packaging, documentation, transport, and approved-facility coordination — **maintaining complete traceability from origin to final handoff**, and transferring the liability off your books for good.

HOW WE PROCESS DISUSED SOURCES

1

Profiling

Full physical, radiological, and chemical information on the source.

2

Pathway Determination

Confirm the outcome and whether it can be processed as-is.

3

Encapsulation

If needed, encapsulated first to bring it into a compliant form.

4

Packaging

Packaged to the appropriate spec for its classification.

5

Logistics

Compliant, coordinated transport to the approved facility.

6

Final Documentation

A Letter of Receipt transfers the liability off your books.
