

AM-241 & AM-241/Be SOURCE RECYCLING

Recycling

A trusted leader in neutron source recycling — more than 50 years recovering and remanufacturing Am-241/Be sealed neutron sources. Our program extends the value of your existing assets, faster and at a fraction of the cost of buying new.

Recycled sources deliver the same certified performance as new — **at roughly one-third to one-half the cost** — and you keep the equity in your existing assets.

HOW RECYCLING WORKS

1

Recover

We recover used Am-241/Be sources, American- or foreign-borne, and evaluate them for remanufacture.

2

Remanufacture

Rebuilt to a legacy design or new model; large sources can be split into smaller activities.

3

Return Value

Reuse your source instead of scrapping it and buying new — preserving your equity at lower cost.
